MUNICITY® + ≡DigEplan™

ePermitting & Code Enforcement Software   **Process Embedded Electronic Plan Review**

The only Building Inspection software from the **International Code Council** can now have DigEplan's electronic plan review software fully embedded within it. This provides an efficient, flexible, and secure method to streamline your electronic plan reviews. You'll accelerate the permit application process!

| Integrated end-to-end permitting in one workflow | Cloud-based solution supporting quick implementation | Increase applicant engagement and experience | Single source of truth document management |

Simplified Plan Review
DigEplan is fully integrated into your document management, screens, workflows and tasking, reducing complexity and providing a better user experience.

Accelerate Processes
Applications that are reviewed by multiple departments no longer require hardcopies to be circulated around the office. Reviewer can go into plans at any time, accelerating review.

Lightning Performance
Large plan sets open quickly. No more wait time, file opening issues, or triage for plans required.

Easily Compare Resubmitted Plans
The *Compare* capability allows users to instantly determine what has been added, removed, or changed in documents. Hard to spot differences between the original file and subsequent resubmittals can be easily identified, saving time and quickly catching accidental or intentional changes beyond what was requested.

Simplified Submission Standards
DigEplan supports the management of plans at a sheet level, removing the need to force applicants to resubmit entire plan sets at each cycle, or requiring plans to be split on upload, which is complicated and cumbersome.

Intelligent & Batch Stamping
Reviewers can apply Intellistamps to electronically sign and stamp document sets with attributes from your government technology platform. Intelligent stamps retrieve and insert information, enabling quick approvals and digital sign-off.

Easily Extract Correction Comments
Once a document has been reviewed, the details of any correction comments can be extracted from the marked-up plans and used to populate the comment report. This allows comments to be tracked through multiple review cycles.
